Subject Index of Volume 38

Alkali metal(s)
GICs, hexagonal and nonhexagonal superlattice structures on stage-1, studied by scanning tunnelling microscopy, 157
stability of, in interlayer spacing of graphite, 403
Aluminium
studies of polyparaphenylene/Al interface, 69
Anion incorporation
IR spectroscopic observation of, in conducting polypyrrole films, 117

Band structure
of poly(perinaphthalene), 313
Batteries
characteristics of practical, employing polyacenic semiconductive materials as electrodes, 185
BEDT-TTF salt
new bis(ethylenedithio)tetrathiafulvalene chloride, $(BEDT\text{-}TTF)_2Cl\cdot 3H_2O$, 353
Bis(ethylenedithio)tetrathiafulvalene chloride
new, $(BEDT\text{-}TTF)_2Cl\cdot 3H_2O$, 353

Chain flexibility
in polyheteroaromatic polymers; electronic properties, structure and vibrational spectra of oligomers as models of polypyrrole and polythiophene, 299
Chain length effect
on electroactivity of poly(*N*-alkyl-3,6-carbazolediyl) thin films, 331
Charge-density wave state
gapless, of heavily ClO_4-doped polyacetylene, 253
Charge-transfer complexes
electron paramagnetic resonance studies of polymeric, 53
Computer modelling
of dimer geometries in simple radical ion salts, 77
Conducting composites
physicochemical characterization of mixed, obtained by electropolymerization of pyrrole into perfluorinated ionomer gels, 277
Conduction
in metallic *trans*-polyacetylene, 319
Conductive polymer
structure of diphenyltriazole, potential monomer for, 263
Conductive polymer electrodes
mechanism of self-discharge in, 135
Conductivity measurements
method for electrochemical *in situ*, of electrochemically synthesized intrinsically conducting polymers, 99
Copper
complexation of electroconducting polypyrrole with, 205
Counterions
polypyrrole with free radical-derived, 341
Crystallographic structures
of organic conducting salts $(DMt\text{-}TCF)_2X$ (C=S or Se), and electronic, 13

5,5-Dibromo-2,3,7,8-tetramethoxyselenanthrene
electrical and dielectric properties of; self-stacking systems, 93
Dielectric properties
self-stacking systems; electrical and, of 5,5-dibromo-2,3,7,8-tetramethoxyselenanthrene, 93
Dimer geometries
computer modelling of, in simple radical ion salts, 77
Diphenyltriazole
structure of, potential monomer for conductive polymer, 263
Diphthalocyanine
evidence for intrinsic and extrinsic semiconducting properties of Lu diphthalocyanine thin films, 121

Electrical properties
of 5,5-dibromo-2,3,7,8-tetramethoxyselenanthrene, 93
of $NbTe_4$ and $TaTe_4$, 227

Elsevier Sequoia/Printed in The Netherlands

Electroactivity
chain length effect on, electroactivity of poly(*N*-alkyl-3,6-carbazolediyl) thin films, 331
Electrochemical preparation
of poly(3-propanoylpyrrole) and poly(3-phenylpyrrole), 371
Electrochemical properties
fundamental; studies of porous polyacenic semiconductors toward application, 177
Electrochemical synthesis
and study of poly(*N*-phenyl-1-naphthylamine), 381
Electrochemistry
at modified electrodes; electronically conductive metallophthallocyanine coatings, 243
Electrodes
characteristics of practical batteries employing polyacenic semiconductive materials as, 185
conductive polymer, mechanism of self-discharge in, 135
electrochemistry at modified; electronically conductive metallophthallocyanine coatings, 243
Electron beam irradiation
effect of, on conducting Langmuir–Blodgett films, 127
Electronic orderings
in quasi-two-dimensional semiconductor, 213
Electronic properties
structure and vibrational spectra of oligomers as models of polypyrrole and polythiophene, 299
Electronic structures
crystallographic and, of organic conducting salts $(DMtTCF)_2X$ (C=S or Se), 13
Electron paramagnetic resonance studies
of polymeric charge-transfer complexes, 53
Electropolymerization
physicochemical characterization of mixed conducting composites obtained by, of pyrrole into perfluorinated ionomer gels, 277

FT-IR spectra
diffuse reflectance, of conducting polymeric films, 259

Graphite
Na–graphite system at high pressures, 363
stability of alkali meals in interlayer spacing graphite, 403
Graphite fibers
NMR study of structural phase transitions in fluorinated, 389
Graphite intercalation compounds
c-axis thermal expansion of donor, 235
hexagonal and nonhexagonal superlattice structures on stage-1 alkali metal, studied by scanning tunnelling microscopy, 157

Hexamethylenetetratellurafulvalene
and its thia- and selena-analogues, Raman frequency shifts on ionization of, 269
Hydroquinone
mediated oxidation of, on poly(*N*-ethylcarbazole); analysis of transport and kinetic phenomena by impedance techniques, 195

Impedance techniques
mediated oxidation of hydroquinone on poly(*N*-ethylcarbazole); analysis of transport and kinetic phenomena by, 195
Iodine
polarized reflection spectra of I-doped new-type polyacetylene, 37
Ionization
of hexamethylenetetratellurafulvalene and its thia- and selena-analogues, Raman frequency shifts on, 269
IR spectroscopic observation
of anion incorporation in conducting polypyrrole films, 117

Junction characteristics
of polybenzo[*b*]thiophene, 63

Kinetic phenomena
mediated oxidation of hydroquinone on poly(*N*-ethylcarbazole); analysis of transport and, by impedance techniques, 195

Langmuir–Blodgett films
effect of electron beam irradiation on conducting, 127

Lutetium
evidence for intrinsic and extrinsic semiconducting properties of Lu diphthalocyanine thin films, 121

Metallophthalocyanine coatings
electronically conductive; electrochemistry at modified electrodes, 243
3-Methylthiophene
plasma polymerization of thiophene and, 107

Niobium
electrical properties of $NbTe_4$ and $TaTe_4$, 227
NMR study
solid-state ^{15}N CPMAS, of structure of polypyrrole, 293
of structural phase transitions in fluorinated graphite fibers, 389

Oligomers
electronic properties, structure and vibrational spectra of, as models of polypyrrole and polythiophene, 299
Organic conducting salts
crystallographic and electronic structures of, $(DMtTCF)_2X$ (C=S or Se), 13
Oxidation
mediated, of hydroquinone on poly(*N*-ethylcarbazole); analysis of transport and kinetic phenomena by impedance techniques, 195

Perfluorinated ionomer gels
physicochemical characterization of mixed conducting composites obtained by electropolymerization of pyrrole into, 277
Phase transitions
NMR study of structural, in fluorinated graphite fibers, 389
Photoluminescence
resonant Raman spectra and, in polythiophene, 1
Physicochemical characterization
of mixed conducting composites obtained by electropolymerization of pyrrole into perfluorinated ionomer gels, 277
Plasma polymerization
of thiophene and 3-methylthiophene, 107
Polarized reflection spectra
of I-doped new-type polyacetylene, 37
Polyacenic semiconductors
studies of porous, toward application
characteristics of practical batteries employing polyacenic semiconductive materials as electrodes, 185
fundamental electrochemical properties, 177
preparation and structural analysis, 169
Polyacetylene
conduction in metallic *trans*-, 319
gapless charge-density wave state of heavily ClO_4-doped, 253
polarized reflection spectra of I-doped new-type, 37
structural changes of *trans*-, in heavily n-type-doped regime, 395
Polyacetylene films
Rutherford backscattering and Raman spectroscopy studies of polymeric ordering in; relation between morphology and purity, 143
Poly(*N*-alkyl-3,6-carbazolediyl)
thin films, chain length effect on electroactivity of, 331
Polybenzo[*b*]thiophene
junction characteristics of, 63
Poly(*N*-ethylcarbazole)
mediated oxidation of hydroquinone on; analysis of transport and kinetic phenomena by impedance techniques, 195
Polyheteroaromatic polymers
chain flexibility in; electronic properties, structure and vibrational spectra of oligomers as models of polypyrrole and polythiophene, 299
Polymer(s)
method for electrochemical *in situ* conductivity measurements of electrochemically synthesized intrinsically conducting, 99
structure of diphenyltriazole, potential monomer for conductive, 263
Polymer electrodes
mechanism of self-discharge in conductive, 135
Polymeric films
diffuse reflectance FT-IR spectra of conducting, 259
Polymeric ordering
Rutherford backscattering and Raman spectroscopy studies of, in polyace-

tylene films; relation between morphology and purity, 143
Polyparaphenylene
/Al interface, studies of, 69
Poly(perinaphthalene)
band structure of, 313
Poly(1,4-phenylene)
oriented crystalline film of poly(2,5-thienylene) formed by vacuum deposition and its crystal structure; comparison with similarly oriented crystalline film of, 399
Poly(*N*-phenyl-1-naphthylamine)
electrochemical synthesis and study of, 381
Poly(3-phenylpyrrole)
electrochemical preparation of, 371
Poly(3-propanoylpyrrole)
electrochemical preparation of, 371
Polypyrrole
complexation of electroconducting, with Cu, 205
electronic properties, structure and vibrational spectra of oligomers as models of, and polythiophene, 299
with free radical-derived counterions, 341
solid-state ^{15}N CPMAS NMR study of structure of, 293
Polypyrrole film(s)
IR spectroscopic observation of anion incorporation in conducting, 117
simple preparation of conducting and transparent, 87
Poly(2,5-thienylene)
oriented crystalline film of, formed by vacuum deposition and its crystal structure; comparison with similarly oriented crystalline film of poly(1,4-phenylene), 399
Polythiophene
electronic properties, structure and vibrational spectra of oligomers as models of polypyrrole and, 299
resonant Raman spectra and photoluminescence in, 1
Pyrrole
physicochemical characterization of mixed conducting composites obtained by electropolymerization of, into perfluorinated ionomer gels, 277

Radical ion salts
computer modelling of dimer geometries in simple, 77
Raman frequency shifts
on ionization of hexamethylenetetratellurafulvalene and its thia- and selena-analogues, 269
Raman spectra
resonant, and photoluminescence in polythiophene, 1
Raman spectroscopy
Rutherford backscattering and, studies of polymeric ordering in polyacetylene films; relation between morphology and purity, 143
Rutherford backscattering
and Raman spectroscopy studies of polymeric ordering in polyacetylene films; relation between morphology and purity, 143

Scanning tunnelling microscopy
hexagonal and nonhexagonal superlattice structures on stage-1 alkali metal GICs studied by, 157
Selenium
crystallographic and electronic structures of organic conducting salts $(DMtTCF)_2X$ (C=S or Se), 13
Self-discharge
in conductive polymer electrodes, mechanism of, 135
Self-stacking systems
electrical and dielectric properties of 5,5-dibromo-2,3,7,8-tetramethoxyselenanthrene, 93
Semiconducting properties
of Lu diphthalocyanine thin films, evidence for intrinsic and extrinsic, 121
Semiconductor(s)
electronic orderings in quasi-two-dimensional, 213
studies of porous polyacenic, toward application
characteristics of practical batteries employing polyacenic semiconductive materials as electrodes, 185
fundamental electrochemical properties, 177
preparation and structural analysis, 169
Sodium
–graphite system at high pressures, 363

Stability
of alkali metals in interlayer spacing of graphite, 403
Structural analysis
preparation and; studies of porous polyacenic semiconductors toward application, 177
Structural changes
of *trans*-polyacetylene in heavily n-type-doped regime, 395
Sulfur
crystallographic and electronic structures of organic conducting salts $(DMtTCF)_2X$ (C=S or Se), 13
Superlattice structures
hexagonal and nonhexagonal, on stage-1 alkali metal GICs studied by scanning tunnelling microscopy, 157

Tantalum
electrical properties of $NbTe_4$ and $TaTe_4$, 227
Thermal expansion
c-axis, of donor GICs, 235
Thiophene
plasma polymerization of, and 3-methylthiophene, 107

Vacuum deposition
oriented crystalline film of poly(2,5-thienylene) formed by, and its crystal structure; comparison with similarly oriented crystalline film of poly(1,4-phenylene), 399
Vibrational spectra
electronic properties, structure and, of oligomers as models of polypyrrole and polythiophene, 299
